Creator Intelligence Engine
Prepared for Chtrbox (Chatterbox Technologies Ltd)

FOUNDER'S OFFICE · STRATEGY & EXECUTION

Verified ROI, not vanity metrics.

The platform, the go-to-market and the operating plan to make creator selection and measurement Chtrbox's moat: 30, 60 and 90 days, then years one and two.

What is built
A working prototype: brand matching, forecasting, discovery, vertical playbooks and verified-ROI campaign analytics.

What is asked
A six-person core pod and ₹81L for 90 days, released in tranches against measurable gates.

What it returns
About ₹5.5 Cr a year in contribution at maturity (base case), plus a new measurement revenue line.

Chethan N · 21 October 2026

Platform data is simulated; company figures are from public sources, cited in the appendix.

19 Before we proceed: pre-flight checks

20 Risks, warnings and honest cons

21 Roadmap: years one and two

22 Interview walkthrough and likely questions

A Appendix: sources, assumptions, glossary

How to read the numbers

Three kinds of number appear here, and each is marked. **Public:** Chtrbox and market figures from filings coverage and press, cited in the appendix. **Simulated:** creators, campaign results and forecasts from the prototype. Creator identities are synthetic. Brand names are publicly reported Chtrbox clients or labelled prospects, but every metric attached to them is modelled. **Assumption:** my estimates for cost, team and value, to be validated with the CFO in week one.

01 · THE SHORT VERSION

Executive summary

Chtrbox grew revenue 42.5% to ₹84.2 Cr in FY26, but EBITDA margin fell from 20.5% to 17.0%. Growth is being bought with people: every new brief needs strategists to search, shortlist, negotiate and report by hand. The company has already said where it wants to go: from a service-led model to a platform and intelligence-led one, with verified ROI instead of vanity metrics. This document is the plan to get there.

3 questions

Every brand asks: who should we work with, what will it deliver, and did it work? The engine answers each with data instead of opinion.

2.7× more

verified target-group views for Olay than a follower-count plan at the same ₹18L spend (simulated), with 11% fake audience instead of 45%.

2.6× revenue

forecast for Amazon's conversion brief versus picking the biggest accounts first, using the same budget (simulated).

What I am proposing

- **Build the Creator Intelligence Engine** on top of the real-time tracking and attribution Chtrbox already runs. It ranks creators for each brief with an explainable seven-part fit score, forecasts outcomes with a confidence band, and reports every campaign on a six-level verified-ROI ladder.
- **Start where the data is richest:** Beauty and E-commerce, which account for most of the reported client list (Olay, Bioderma, d'Alba, Celimax, Forever52, Nykaa, Amazon, Flipkart, Meesho). Then FMCG and Fashion, then Health and BFSI behind compliance gates, then the Dubai hub.
- **Protect the peak.** Days 0–60 overlap October–March, when about 60% of annual revenue lands. The engine runs in shadow mode beside strategists until it beats their picks on held-out briefs.
- **Make verified ROI a product.** Package it as a measurement fee (6–10% of creator spend) and as outcome-linked pricing for performance brands, creating a revenue line that does not scale with headcount.

What success looks like at day 90

MEASURE	TODAY (TO CONFIRM)	DAY 90
Campaigns with a verified-ROI report (L4+)	~0%	50%
Brief to shortlist	~3 days	4 hours
Engine picks in final rosters	–	65%
Views forecast error (MAPE)	–	under 20%
Spend on fraudulent or conflicted creators	unknown	₹0
Pitch win rate on verified-ROI pitches	baseline	+8 pts

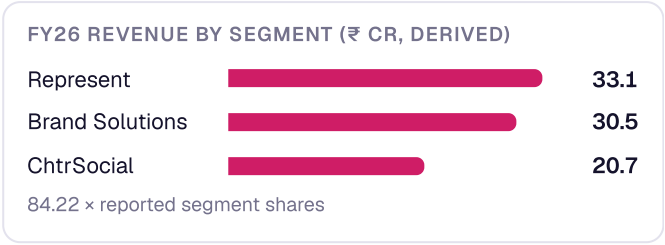

What I need

A six-person core pod (data engineer, ML scientist, two full-stack engineers, a measurement analyst and two data-ops associates, with design and compliance part-time), two strategists and a talent manager seconded part-time, and **₹81L for the first 90 days**. Year one is about ₹4.0 Cr all-in, released in three tranches against the day-90 and month-6 gates. Base-case payback is about 24 months, and the gates are there so we stop early if the numbers don't come.

02 · PUBLIC NUMBERS, AND WHAT THEY IMPLY

Where Chtrbox stands

METRIC	VALUE	SOURCE
FY26 revenue from operations	₹84.22 Cr, +42.5%	[4][5]
FY26 EBITDA · margin	₹14.32 Cr · 17.0% (FY25: 20.5%)	[4]
FY26 PAT · margin	₹9.2 Cr · 10.9% (FY25: 14.9%)	[4]
H2 FY26 revenue	₹48.23 Cr, +50% YoY; PAT down 12%	[3]
FY26 revenue mix	Represent 39% · Brand Solutions 36% · ChtrSocial 25%	[5]
FY25 revenue mix	Represent 46% · ChtrSocial 11%	[5]
Seasonality	~60% of revenue in H2 (Oct–Mar)	[6][8]
Geography (FY25)	Maharashtra 57.9% of revenue	[8]
Client concentration	Top-5 customers 22.6% (FY25), from 48.8% (FY24)	[6]
IPO (BSE SME, Oct 2025)	₹42.86 Cr at ₹115; 52× subscribed	[2]
IPO use of proceeds	Capex ₹11.07 Cr · office & studio ₹7.14 Cr · brand ₹5.02 Cr · WC ₹6.33 Cr	[7]
Network	3L+ creators; ~104 exclusively managed	[9][17]
Leadership	Raj Mishra, MD & CEO (ex-TikTok India)	[9][10]
Expansion	Dubai hub for MENA (Jan 2026); evaluating tech acquisitions (Jun 2026)	[10][11]

Market context

Estimates for India's influencer-marketing market cluster around ₹3,600 Cr (2024) growing about 25% a year to roughly ₹4,500 Cr in 2025, with e-commerce the largest spender at about 23% share [18][19]. Brands are moving budget from experiments to accountable programmes, which favours the agency that can prove outcomes.

Five implications

- **Margin is the problem to solve, not growth.** Revenue is growing faster than the market, but each rupee costs more to deliver. Tooling that cuts strategist hours per campaign and fees lost to bad picks goes straight to margin.
- **Represent and Brand Solutions are 75% of revenue and share one input: knowing which creator fits which brief.** The engine serves both. Talent managers see roster demand; strategists get shortlists.
- **The peak is October to March.** Any change to delivery must not land in the middle of festive and wedding season. Hence shadow mode first.
- **Concentration has fallen; repeat business now matters more.** With the top five clients at 22.6%, growth depends on many mid-size brands renewing. A verified-ROI report gives a renewal argument that a screenshot deck cannot.
- **The company has publicly committed to this direction.** IPO proceeds are earmarked for technology and creator intelligence, and the CEO has framed the goal as verified ROI with live tracking [12]. This plan executes a stated strategy rather than inventing a new one.

The problem from first principles

A brand does not buy posts. It buys a change in what people think or do: remembering the brand, considering it, or buying it. Everything else is a proxy. Influencer marketing still runs on the weakest proxies because they are the easiest to collect.

Why vanity metrics persist

- **Information asymmetry.** Creators report their own numbers, often as screenshots. Brands can't check audience quality.
- **No counterfactual.** Few campaigns run a holdout, so nobody knows which sales would have happened anyway.
- **Fragmented data.** Reach lives on the platform, clicks in link tools, orders in the brand's systems, returns in the warehouse.
- **Incentives.** Bigger reported numbers make everyone look good in the wrap-up deck.

Four Rs, in order

- **Reach:** real people in the target group, deduplicated and bot-filtered, not followers.
- **Relevance:** audience, category and cultural fit with the brief.
- **Resonance:** attention and trust: watch-through, saves, sentiment, recall lift.
- **Return:** verified and incremental outcomes, net of returns and organic baseline.

Chtrbox already describes matching as reach, relevance and resonance [9]. The engine adds the fourth R and puts a number on each.

Where value leaks today

LEAK	CAUSE	WHAT THE ENGINE DOES	MEASURED BY
Fake or inactive audiences bought	Follower counts taken at face value	Authenticity gate (72% real followers) and score	Spend on gated creators = ₹0
Competitor conflicts	No memory of creators' recent brand work	60-day exclusivity check before ranking	Conflicts caught pre-contract
Regulatory exposure	Unqualified health or finance claims	Credential and SEBI eligibility gates	Compliance incidents = 0
Strategist hours	Manual search across thousands of profiles	Ranked shortlist with reasons in minutes	Brief-to-shortlist time
Overpaying for reach	Big accounts cost less per follower but deliver less per rupee	Plan builder optimises outcome per rupee	Cost per verified TG view
Weak renewals	Wrap-up decks can't prove impact	Verified-ROI report with holdouts and lift	Repeat-brand rate

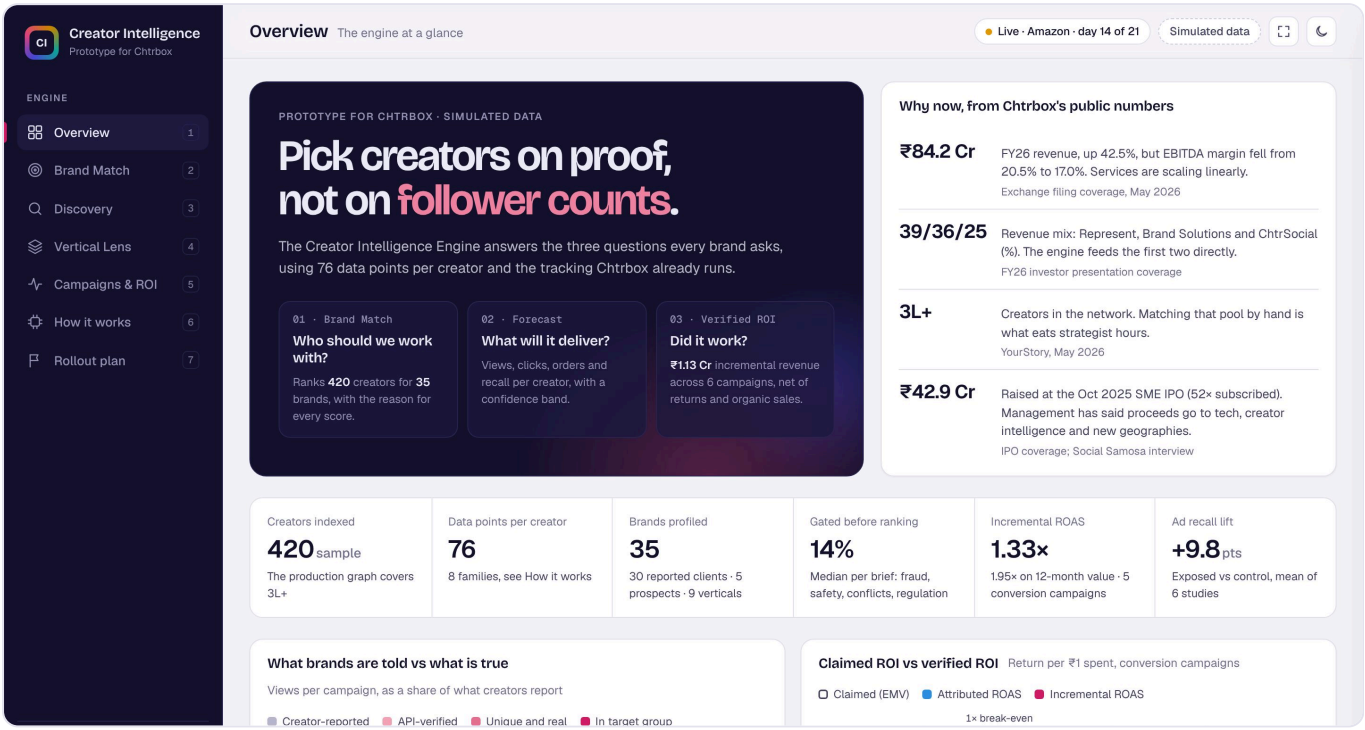

The core bet

The agency that can say *these creators will deliver this, with this confidence*, and later *here is what actually happened, net of what would have happened anyway*, will win the accountable budgets. That needs three assets Chtrbox already has: a large creator network, years of campaign outcomes, and live tracking. The engine connects them.

04 · A WORKING PROTOTYPE, SHOWN IN THE INTERVIEW

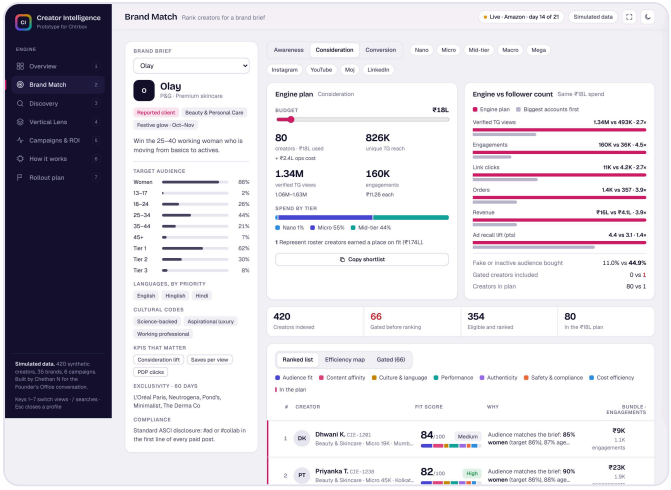

What is built: the platform

The prototype is a single offline web app (`Creator-Intelligence-Engine.html`) with seven modules. It runs on a sample of 420 synthetic creators, 35 brands across 9 verticals and 6 simulated campaigns. The scoring, forecasting and plan logic is the logic described in sections 5 to 7.

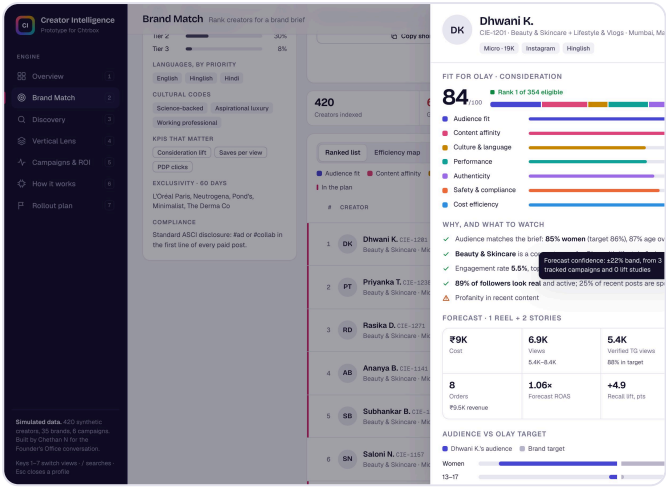

Overview: the thesis, Chtrbox's public numbers, reported-versus-real views and claimed-versus-verified ROI.

MODULE	WHAT IT DOES	WHO USES IT
Overview	Thesis, why now, headline engine metrics	Leadership, pitches
Brand Match	Brand DNA → hard gates → seven-part fit score → plan under budget → engine vs follower-count comparison → efficiency map	Strategists
Creator profile	76 data points, audience vs target mirror, forecast with confidence band, reasons and risks	Strategists, talent managers
Discovery	Plain-language search ('Hindi beauty creators under 25k with ER above 3%') parsed into filters, ranked for a brand	Strategists, sales
Vertical Lens	Playbooks for 9 verticals, talent heatmap, top creators, archetypes, tier benchmarks	Sales, planners
Campaigns & ROI	Live tracking, reported-to-real ladder, revenue waterfall, brand lift, holdout, leaderboard, alerts	Account teams, brands
How it works · Rollout	Data families, formula, gates, ROI ladder, model maturity; 30/60/90 plan	Everyone

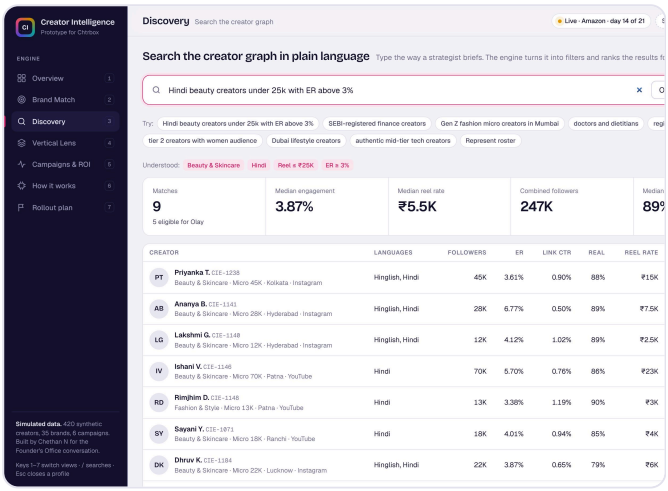

Brand Match for Olay: brand DNA, objective, the engine plan and the comparison with a follower-count plan at the same spend.

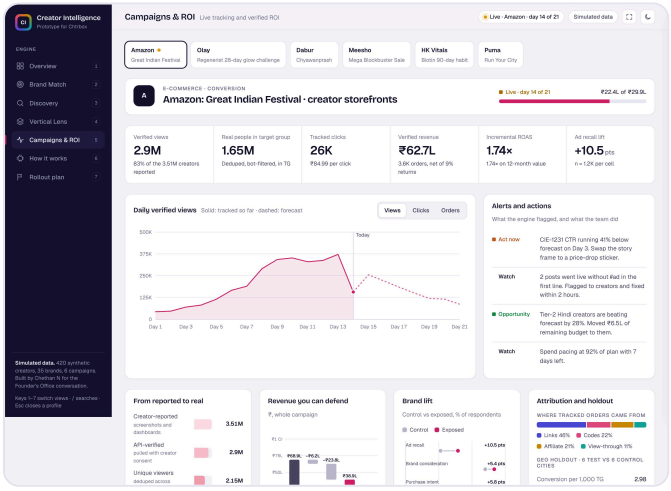

Creator profile: fit breakdown, reasons, risks and forecast with a confidence band.

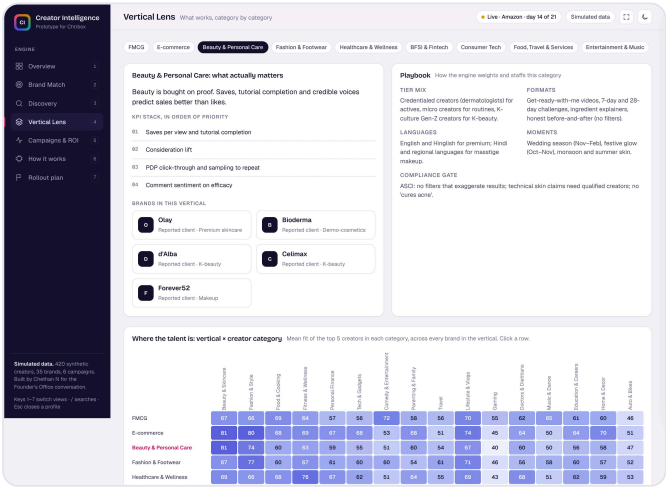

Efficiency map: outcome per rupee. The engine plan sits above the median line; the follower-count plan buys the expensive dots on the right.

Discovery: plain-language search parsed into filters.

Campaigns & ROI: the live Amazon campaign, from reported views to real people in the target group, and revenue you can defend.

Vertical Lens: where the talent is, by vertical and creator category.

05 · WHAT WE COLLECT, FROM WHERE, HOW OFTEN

The data: 76 points per creator

FAMILY	#	DATA POINTS	SOURCE	REFRESH
Identity & profile	12	Platforms, followers by platform, tier, city, languages, primary and secondary category, pillars, verified credentials, roster status, market, gender	Creator OAuth, CRM	On change
Audience	14	Gender, age buckets, city tiers, top cities, audience languages, affluence index, interests, overlap between creators, 12-month growth, 90-day growth, country split, active share, device mix, peak hours	Instagram Graph / YouTube Analytics with consent	Weekly
Content & culture	9	Cultural codes, hook strength, production quality, format mix, cadence, integration style, comment sentiment, topics, visual safety tags	Vision + language models on frames, audio, captions	Per post
Performance	12	ER, average views, view-through, 3-second hold, saves/view, shares/view, comment quality, story link CTR, reel/bio CTR, past conversion, recall lift, forecast-error history	APIs + Chtrbox campaign history	Daily / per campaign
Authenticity	7	Real and active follower share, growth spikes, engagement pods, bot comments, engagement-follower consistency, sponsored saturation, bot-cluster overlap	Graph analysis, anomaly detection	Weekly
Safety & compliance	8	Safety score, flag categories, ASCI disclosure rate, credential verification, competitor posts (120 days), exclusivity windows, controversies, regulated-category eligibility	AI review + human QA	Per post / monthly
Commercials	6	Rate card, negotiated-rate history, on-time delivery, response time, payment terms, TDS (194R/194J) and GST status	Chtrbox ops data	Per deal
Outcomes	8	API-verified views, unique reach, tracked clicks, orders and revenue net of returns, incrementality, brand lift, 12-month value, content reuse in paid	Existing tracking & attribution, brand data, lift studies	Per campaign

Acquisition plan

- **Consent first.** Creators connect Instagram and YouTube through OAuth, which unlocks first-party audience demographics that public scraping cannot give and platform terms do not allow.
- **Start with the Represent roster** (about 104 creators), where Chtrbox has a contract and a relationship. Then the 2,000 creators used most in the last 24 months, then the next 8,000.
- **Give creators a reason:** a personal scorecard, faster brief matching and faster payments in exchange for connecting.
- **Fill gaps with licensed data,** such as third-party creator-data APIs, for coverage beyond consented creators, clearly flagged as lower confidence.

Data-quality rules

- Every field carries its source, timestamp and confidence; stale fields decay in the score.
- Audience data older than 30 days is refreshed before a creator is shortlisted.
- Brand outcome data is used for training only in aggregate, under a contract clause agreed with each brand.
- No personal data on followers is stored. The engine needs distributions, not individuals.
- A data-ops associate reviews a 5% sample of AI tags each week; tags below 90% precision are retrained.

06 · EXPLAINABLE BY DESIGN

The matching and forecasting model

$$\text{Fit} = w_1 \cdot \text{Audience fit} + w_2 \cdot \text{Content affinity} + w_3 \cdot \text{Culture \& language} + w_4 \cdot \text{Performance} + w_5 \cdot \text{Authenticity} + w_6 \cdot \text{Safety \& compliance} + w_7 \cdot \text{Cost efficiency} \quad (+ \text{Represent boost} \leq 5)$$

PART	HOW IT IS MEASURED	AWARENESS	CONSIDERATION	CONVERSION
Audience fit	Overlap of gender, age, city tier and affluence with the brand's target	22	20	18
Content affinity	Brand's affinity to creator's primary (75%) and secondary (25%) category	15	18	14
Culture & language	Best language match + shared cultural codes (festive, regional pride, Gen-Z humour…)	14	10	8
Performance	Within-tier percentiles. Awareness: view-through, hold, recall. Consideration: ER, saves+shares, sentiment. Conversion: link CTR, trust, ER	15	20	26
Authenticity	Real-follower share, content quality, sponsored saturation, growth anomalies	14	14	14
Safety & compliance	Brand-safety score and #ad disclosure rate	10	8	8
Cost efficiency	Outcome per rupee, percentile among eligible creators	10	10	12

Hard gates, before any score

- Real and active followers below 72%
- Brand-safety score below 55
- Posted for a named competitor in the last 60 days
- Finance: investing content without SEBI registration (SEBI-regulated brands cannot associate)
- Health: technical claims without a medical or nutrition qualification (ASCI Addendum II)
- Audience outside the campaign's market

Gated creators are listed with the reason, so a strategist can challenge a gate rather than wonder why someone is missing.

Forecast, per creator

- Views = average reel views + story views (followers × tier story-view rate × 2)
- Verified TG views = views × real-follower share × target-group share
- Clicks = (reel views × CTR × 0.3 + story views × CTR × 1.3) × category affinity
- Orders = clicks × brand conversion × creator trust × assist factor (codes, affiliate, search)
- Confidence band ±12%, ±22% or ±35% depending on tracked campaigns and lift studies

Plan builder

Picks creators by fit² × authenticity × outcome per rupee, including a ₹3,000 per-creator operating cost, with caps of one mega and three macro creators and no single creator above 25% of budget.

How the model improves

VERSION	WHEN	WHAT CHANGES	GATE TO MOVE ON
v0 · rules	Days 0–15	Expert weights, gates, benchmarks from historical campaigns	Strategists agree the top 20 are plausible on 5 briefs

VERSION	WHEN	WHAT CHANGES	GATE TO MOVE ON
v1 · calibrated	Days 30–45	Forecast multipliers fitted to the first 10+ tracked campaigns, by tier and vertical	Views MAPE < 30%
v2 · learning-to-rank	Days 60–90	Ranking trained on strategist choices and outcomes; overrides become labels	Engine picks ≥ 50% of final rosters
v3 · incrementality	Months 4–6	Holdout and brand-lift results reweight forecasts toward incremental outcomes	iROAS reported on 80% of conversion spend
v4 · graph and pricing	Year 1–2	Creator–brand graph predicts fit for new brands; fair-rate model per outcome	Pricing accepted by 5+ brands

Fairness check

Performance is compared within each tier, so nano and regional creators are not crowded out by reach. Each quarter we audit the share of shortlist slots by language, city tier and creator gender against the eligible pool, and investigate any group under-selected by more than 20%.

07 · EVERY NUMBER CARRIES ITS LEVEL

The verified-ROI framework

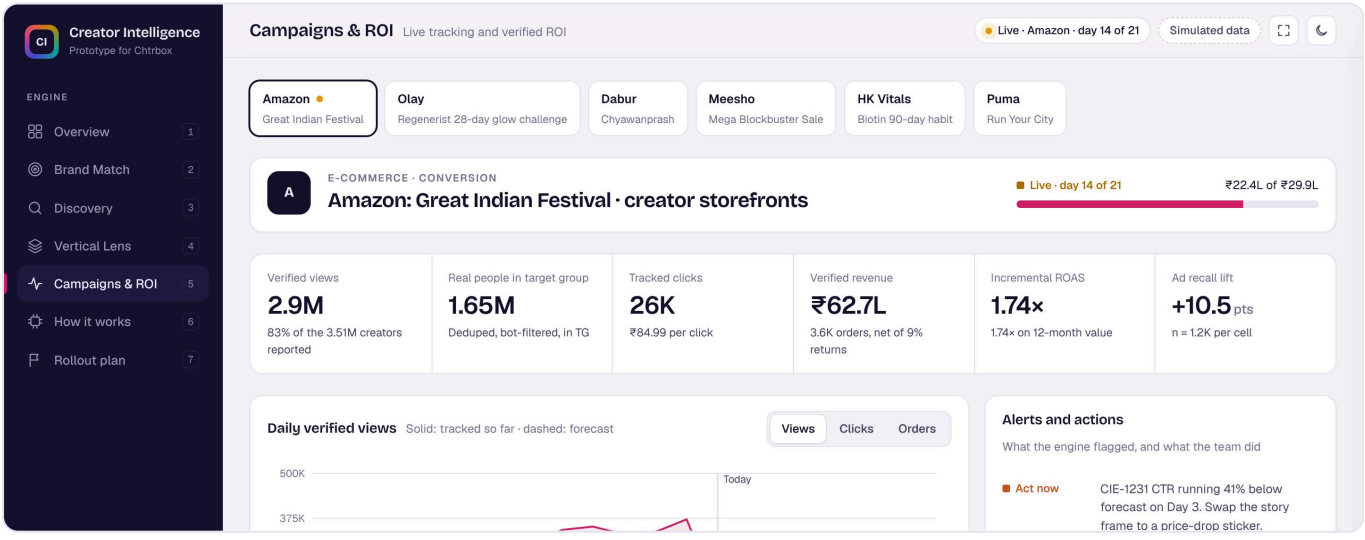

LEVEL	NAME	WHAT IT MEANS	METHOD	WHO CAN CLAIM IT
L0	Reported	Followers, likes, creator screenshots	None	Never shown as a result
L1	Verified delivery	Views pulled by API, deduped	Creator OAuth, platform insights	Delivery reports
L2	Quality	Real people in the target group, watch time	Authenticity and audience model	Awareness reports
L3	Action	Tracked clicks, codes, installs, add-to-cart	Existing tracking and attribution	Performance reports
L4	Outcome	Orders and revenue matched to brand data, net of returns	Brand data, marketplace attribution, MMP	'Verified' starts here
L5	Incremental	Outcomes that would not have happened anyway	Geo holdouts, brand lift, MMM	iROAS

Measurement by objective

OBJECTIVE	PRIMARY	METHOD
Awareness	Verified TG reach, ad recall lift	Brand lift: exposed vs control, n ≈ 1,200 per cell
Consideration	Consideration lift, saves, PDP visits	Brand lift + tracked clicks
Conversion	Verified orders, iROAS, CAC	Codes + links + affiliate; 6 test vs 6 control cities

What a client report contains

- Spend, delivery and pacing against plan
- The ladder: reported → API-verified → unique → real → in target group
- Revenue waterfall: attributed → returns → organic baseline → incremental
- Brand lift with sample sizes and significance
- Creator leaderboard: forecast vs actual
- What we changed mid-flight and why
- The level (L0–L5) of every number

Simulated Amazon campaign: 3.51M reported views become 1.65M real people in the target group. Attributed ROAS is about 3.1×; incremental ROAS after returns and organic baseline is about 1.7×.

Why this is a sales asset, not just a report

The honest number is usually lower than the vanity number. Brands that have been burned know this. Showing the claimed figure, the attributed figure and the incremental figure side by side, then showing how the engine raises the incremental one, is the strongest renewal and pitch argument available.

08 · ONE REPORTED CLIENT, EVERY DATA POINT

Brand to creators: Olay, worked end to end

The brief (Brand DNA)

FIELD	OLAY
Category	Premium skincare (P&G) · Reported Chtrbox client
Job to be done	Win the 25–40 working woman who is moving from basics to actives.
Objective	Consideration
Target	86% women · core age 25–34 (44%) and 35–44 (21%) · 62% tier 1 · affluence index 70
Languages	English, Hinglish, Hindi
Cultural codes	Science-backed · Aspirational luxury · Working professional
KPIs	Consideration lift · saves per view · PDP clicks
Exclusivity (60 days)	L'Oréal Paris, Neutrogena, Pond's, Minimalist, The Derma Co
Moment	Festive glow · Oct–Nov

What the engine did

STEP	RESULT
Creators indexed	420
Gated before ranking	66: 16 competitor conflicts, 4 safety, 32 fake audience, 18 wrong market
Eligible and ranked	354
In the ₹18L plan	80 creators
Verified TG views	1.34M vs 492.7K for a follower-count plan (2.7×)
Engagements	159.9K vs 35.8K (4.5×)
Ad recall lift	+4.4 vs +3.1 pts
Fake or inactive audience bought	11% vs 45%

Same spend for both plans. The follower-count plan simply buys the largest accounts until the money runs out.

Top 10 creators for Olay (simulated)

#	CREATOR	CATEGORY · TIER	FIT	ER	LINK CTR	REAL	BUNDLE COST	TG VIEWS	ENGAGEMENTS	RECALL

09B · WHAT ACTUALLY MATTERS IN EACH CATEGORY

Vertical playbooks

VERTICAL	THESIS	KPI STACK (IN ORDER)	TIER MIX	COMPLIANCE GATE
FMCG	Reach the target group often and cheaply, then prove memory moved. Sales show up in quick-commerce and kirana, not clicks.	TG reach & frequency → recall lift → q-commerce search/sales lift in test cities → sampling redemptions	60% nano/micro regional, 30% mid, one macro anchor	Health-benefit claims need substantiation; no cure language (Drugs & Magic Remedies Act)
E-commerce	Every rupee should trace to an order: CTR × conversion, net of returns, with new-customer share as the quality check.	Verified orders net of returns → iROAS from geo holdouts → new-customer share → CAC and 60-day repeat	Micro and mid with high link CTR; macro only on sale days	Price claims must match listings; disclose affiliate earnings; no dark-pattern urgency
Beauty & personal care	Beauty is bought on proof. Saves, tutorial completion and credible voices predict sales better than likes.	Saves/view → consideration lift → PDP CTR and sampling-to-repeat → efficacy sentiment	Dermatologists for actives, micro for routines, K-culture Gen-Z for K-beauty	No exaggerating filters; technical skin claims need qualified creators
Fashion & footwear	Fashion runs on taste and on returns. Saves show taste; return-adjusted revenue shows whether it sold.	Saves & shares → PDP CTR → revenue net of returns → store visits	Distinct-style micro, mid for drops, 1–2 macro for launches	Disclose gifting; substantiate sustainability claims
Healthcare & wellness	Trust is the product. A qualified creator with a smaller audience beats a large lifestyle account.	Credentialed reach → trust & sentiment → bookings/orders → 60–90 day repeat	Mid-tier doctors and dietitians as the spine; fitness for lifestyle use	ASCI Addendum II credentials; no disease-cure claims
BFSI & fintech	The most regulated category. Gate who may speak, then optimise for funded accounts, not installs.	Funded accounts/policies → cost per funded account → KYC completion → grievance rate	SEBI-registered advisers for product talk; others brand-scripted only	SEBI finfluencer rules; IRDAI for insurance; ASCI Addendum II
Consumer tech	Researched before bought. Depth and credibility of reviews beat reach.	Consideration lift → store/PDP visits → model-name search lift → review sentiment	YouTube reviewers for depth; Shorts/Reels for launches; education and gaming for laptops	No paid reviews presented as organic; disclose free devices
Food, travel & services	Services are local. City-level creators and redeemable codes tie spend to bookings.	Bookings/app orders → code redemptions by city → route or store lift → repeat	City-specific micro and mid; diaspora creators for Gulf routes	Offer terms must match the app
Entertainment & music	Music wins by being used, not watched. Audio uses and shares lead.	Audio uses → week-one stream lift → shares/view → recall for platform campaigns	Meme-native comedy and dance creators; nano seeding at scale	Licensing on audio; disclose label partnerships

10 · WHO BUYS WHAT, IN WHAT ORDER

GTM segmentation model

SEGMENT	EXAMPLE ACCOUNTS (REPORTED CLIENTS UNLESS MARKED)	WHAT THEY BUY	OFFER	PRICING LOGIC
A · Enterprise brand-builders	P&G (Olay, Whisper), Coca-Cola, Nestlé (KitKat), Dabur, Samsung, HP, Sony, Philips	Safety, scale, proof of recall	**Verified Reach & Lift**: L2 delivery + brand lift + gates	Managed fee + 6–8% measurement fee; lift studies ₹1.5–2.5L each
B · Performance commerce	Amazon, Flipkart, Meesho, Nykaa, Neeman's, HK Vitals, Forever52, Zink London, d'Alba, Celimax, Crocs	Orders, CAC, iROAS	**Verified Performance**: L4–L5, codes, affiliate, holdouts	Base fee + bonus above an agreed iROAS; 8–10% measurement fee
C · Regulated categories	Groww, PolicyBazaar, CRED, Tata 1mg, Cult (prospects); Bioderma, HK Vitals	Compliance, trust, auditability	**Compliant Expert Network**: credential-verified creators, claim review, audit trail	Premium managed fee; per-creator verification fee
D · Agencies & in-house teams	Media agencies subcontracting influencer work; brand in-house teams	Speed and evidence	**Intelligence seats** (Year 2): shortlists, benchmarks, reports	SaaS seats + usage
E · Cross-border (MENA)	IndiGo (Dubai routes), Indian brands entering the UAE, GCC brands targeting the diaspora	Diaspora reach	**Cross-border creator graph** from the Dubai hub	Managed fee, premium rates
Supply side · Represent	~104 exclusive creators	More and better-fitting briefs	Creator scorecards and demand view	Higher utilisation, no direct fee

Sequencing

WHEN	SEGMENTS	WHY
Days 0–45	B (e-com) + Beauty from A/B	Most frequent briefs, measurable outcomes, strongest client list
Days 46–90	Add FMCG and Fashion; Segment A lift studies	Brand-lift method proven on pilots
Months 4–6	C, regulated	Gates and claim review proven first
Day 61+ pilot, Year 1 scale	E, MENA	Dubai team in place; small graph first
Year 2	D, seats	Product mature enough for self-serve

Account prioritisation score

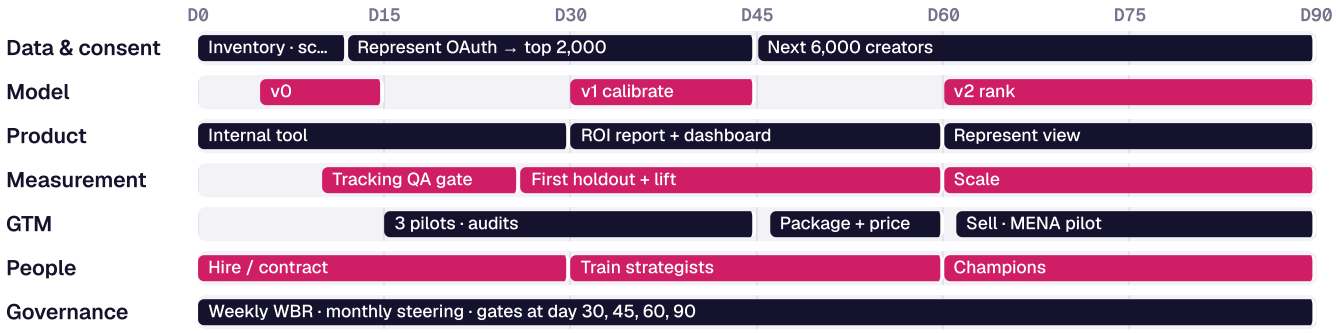

- **Relationship** (existing client = 3, warm = 2, cold = 1)
- **Spend size** (annual creator spend band)
- **Data readiness** (pixel or attribution available, willing to share outcomes)
- **Objective clarity** (a KPI that maps to L3+)
- **Regulatory complexity** (lower is better early)
- **Timing** (a moment in the next 60 days)

The top 15 accounts by this score get the free verified-ROI audit offer in week three.

Sales motion

- **Existing clients first:** offer a free verified-ROI audit of their last campaign (8 pilot brands). Show the gap between claimed and verified, then show how the engine closes it. Convert to a measurement package.
- **New logos:** lead with Vertical Lens insight (benchmarks, archetypes, cost per outcome by tier) and the audit offer.
- **Agencies:** white-label measurement for media agencies that subcontract influencer work.
- **Thought leadership:** a quarterly 'India Creator ROI Index' built from aggregated, anonymised benchmarks, for PR and lead generation.

Execution: 30 · 60 · 90 days

PHASE	KEY ACTIONS	OWNERS	DELIVERABLES	EXIT CRITERIA
Days 0–15 · Foundation	Stakeholder interviews (CEO, heads of Brand Solutions, Represent, ChtrSocial, finance, tech); inventory campaign history, roster and tracking feeds; freeze schema and Brand DNA template; v0 rules and gates; consent flow for Represent; measure baselines; pick 3 pilot brands	Programme lead, data engineer, ML scientist	Data inventory, baseline sheet, v0 model, pilot list	Inventory signed off; baselines measured; 3 pilots agreed
Days 16–30 · Shadow mode	Engine runs beside strategists on 6–8 live briefs with no change to delivery; weekly pick-vs-pick review; tracking QA becomes a go-live gate; design the first holdout and brand-lift study	Strategist champions, analyst	Pick-vs-pick log, tracking QA checklist, test designs	Engine picks ≥ 30% of final rosters; zero untracked campaigns
Days 31–45 · Calibrate	Fit forecasts to first outcomes (v1); tune fraud and safety thresholds on real cases; deliver the first verified-ROI report; close data gaps	ML scientist, analyst	v1 model, first L4 report	Views MAPE < 30%; one L4 report delivered
Days 46–60 · Productise	Brand-facing report and dashboard template; package and price Verified ROI; train every strategist; add Fashion and FMCG; 15+ campaigns through the engine	Programme lead, designer, sales lead	Report template, 2 priced packages, training	25% of campaigns at L4+
Days 61–90 · Scale	50% of campaigns through the engine; v2 learning-to-rank; Represent utilisation view; Dubai pilot (300-creator UAE graph); CFO review of payback	Whole pod	v2 model, Represent view, MENA seed, gate pack	50% at L4+; win rate +5 pts; day-90 gate passed

The first 30 days, week by week

WEEK	WHAT HAPPENS
Week 1	Meet every head of function; agree success metrics; data inventory; baseline brief-to-shortlist time, win rate, margin per campaign, repeat rate
Week 2	Schema freeze; v0 weights with strategists; Represent consent flow live; tracking audit; hiring or contractor plan approved
Week 3	Shadow mode on the first 3 briefs; pick-vs-pick review; tracking QA SOP live; audit offers to the top 15 accounts
Week 4	Shadow mode on 3–5 more briefs; first holdout designed; WBR cadence running; day-30 gate review with CEO and CFO

12 · HOW EACH PHASE'S DATA MAKES THE NEXT PHASE BETTER

The data flywheel

WINDOW	DATA IN	WHAT WE LEARN	MODEL CHANGE	BUSINESS EFFECT
Days 0–15	24 months of campaign history; Represent roster data; current tracking feeds	Baseline benchmarks per vertical and tier; which fields predict outcomes; data gaps	v0 weights and gates; benchmark tables	Strategists get a ranked list on day 15
Days 15–45	6–8 shadow briefs; pick-vs-pick outcomes; first live results; override reasons	Forecast error by tier and vertical; why strategists disagree; false positives in the fraud gate	v1 calibration; vertical weight presets; threshold tuning	Forecasts trusted enough to quote ranges to pilot brands
Days 45–60	15+ campaigns at L4; first brand-lift study; first holdout	Which content codes and languages drive outcomes per vertical; creator-level conversion; recall per creator	Creator-level priors; vertical-specific weights; fair-rate insight	First Verified ROI packages priced and pitched
Days 60–90	30+ campaigns; ~500 logged strategist decisions; Represent demand data; UAE seed data	What good strategists know that the rules miss	v2 learning-to-rank; Represent utilisation model	50% of campaigns through the engine; talent managers see demand
Months 4–12	150+ campaigns; holdouts at scale; consented data for 8,000+ creators	Incrementality by vertical, tier and format; rate-to-outcome curves	v3 incrementality-calibrated forecasts; pricing model; creator scorecards	Outcome-linked pricing; margin +3 pts; renewals citing verified ROI
Years 1–2	500+ campaigns a year; 25,000 consented creators; brand outcome partnerships	Fit for brands with no history; demand forecasting by season	v4 creator–brand graph; seasonal demand model	Intelligence subscriptions; data partnerships; MENA graph live

Why the flywheel compounds

Each campaign adds three things competitors cannot buy: a forecast-versus-actual pair for every creator, a strategist decision with a reason, and (from L4) an outcome tied to a brand's sales. After about 150 campaigns the forecasts are tuned to Indian categories, languages and seasons in a way a generic creator-data tool cannot match. That is the moat.

13 · TEN PROCEDURES THAT MAKE IT REPEATABLE

SOPs

SOP	TRIGGER	OWNER	STEPS	SLA	OUTPUT
SOP-01 · Brief intake → Brand DNA	New brief received	Brand strategist (R) · Head of Brand Solutions (A)	Capture objective and KPI; fill target (gender, age, tier, affluence), languages, cultural codes, competitors and exclusivity window, compliance class, budget and moment; confirm with brand	4 business hours	Signed-off Brand DNA in the engine
SOP-02 · Creator onboarding & consent	Creator joins roster or is shortlisted	Data-ops (R) · Head of Represent (A)	OAuth connect; DPDP consent notice and record; verify credentials (medical, SEBI, CA); PAN for TDS; safety and authenticity scan; tag niche and codes	48 hours	Creator profile at confidence ≥ medium
SOP-03 · Shortlist & human review	Brand DNA approved	Strategist (R) · Programme lead (A)	Run engine; review gated list; pick final roster; log every override with a reason code; check plan against budget and tier caps	4 hrs (2 hrs by month 6)	Shortlist + plan + forecast ranges
SOP-04 · Contracting & compliance	Roster approved by brand	Ops (R) · Legal counsel (A)	Contract with ASCI disclosure clause, exclusivity, morality/kill clause, usage rights, data-sharing clause; TDS (194R/194J) and GST handling; regulated-category script rules	48 hours	Executed contracts
SOP-05 · Content review & brand safety	Draft content received	Strategist (R) · Compliance (C)	AI pre-check for claims, disclosure position and safety; human review; health and finance claim check against substantiation; approve or return with notes	24 hours	Approved content with audit trail
SOP-06 · Tracking setup & go-live gate	Content approved	Analyst (R) · Programme lead (A)	Unique links and codes per creator; affiliate tags; brand pixel/MMP check; holdout cities fixed; test every link; no tracking, no launch	Before go-live	Tracking QA pass (100%)
SOP-07 · Live monitoring & optimisation	Campaign live	Analyst (R) · Strategist (C)	Daily pulse; alert if CTR < 60% of forecast at 48 hours (swap creative), pacing off by > 15%, disclosure missing (fix within 2 hours); reallocate budget to over-performers	Daily	Alert log and actions
SOP-08 · Verified-ROI report	Campaign closes	Analyst (R) · Head of Brand Solutions (A) · Brand (C)	Pull API data; dedupe and bot-filter; match outcomes; net returns; compute holdout lift and brand lift; label every number L0–L5; review with brand	T+7 days (T+5 by month 6)	Client report + data write-back
SOP-09 · Data quality & retraining	Weekly	ML scientist (R) · Programme lead (A)	Drift checks; 5% tag audit; forecast error by segment; retrain monthly; model card updated; fairness audit quarterly	Weekly / monthly	Model card, MAPE trend
SOP-10 · Incident response	Creator controversy, disclosure breach, fraud found, data breach	Programme lead (R) · Legal (A) · CEO (I)	Triage within 1 hour; pause content if needed; inform brand within 4 hours; for personal-data breach follow DPDP notification duties; root cause and fix within 5 days	1 hr triage	Incident record and fix

KPIs

TYPE	KPI	DEFINITION	BASELINE	D30	D60	D90	M12
North Star	**Share of campaign revenue reported at L4+**	Revenue of campaigns with an L4+ report ÷ total campaign revenue	~0%	3 pilots	25%	50%	90%
Engine	Brief to shortlist	Time from approved Brand DNA to shortlist	~3 days	1 day	6 hrs	4 hrs	2 hrs
Engine	Engine picks in final roster	Final-roster creators from engine top 30 ÷ roster size	–	30%	50%	65%	75%
Engine	Views forecast error	Mean absolute % error, posted creators	–	< 35%	< 25%	< 20%	< 15%
Data	Creators with consented data	Creators with live OAuth connection	0	1,500	4,000	8,000	25,000
Safety	Spend on gated creators	₹ spent on creators failing a gate	unknown	₹0	₹0	₹0	₹0
Safety	#ad disclosure on live posts	Compliant posts ÷ paid posts	~85%	95%	98%	99%	99%
Commercial	Win rate, verified-ROI pitches	Won ÷ pitched, vs baseline	baseline	–	+5 pts	+8 pts	+12 pts
Commercial	Gross margin per campaign	vs FY26 baseline	FY26	–	+1 pt	+2 pts	+3 pts
Commercial	Repeat-brand rate	Brands with a second campaign in 6 months	baseline	–	–	+5 pts	+10 pts
Commercial	Measurement revenue	Fees for L4/L5 measurement	₹0	–	first fee	₹25L run-rate	₹2 Cr run-rate
People	Strategist usefulness score	Monthly survey, 1–5	–	3.5	3.8	4.0	4.2

KPI tree

- **North Star:** share of revenue at L4+
- ↳ **Coverage:** consented creators, brands sharing outcomes, tracking QA pass rate
- ↳ **Quality:** forecast error, engine picks in rosters, strategist usefulness
- ↳ **Commercial outcomes:** win rate, repeat rate, margin, measurement revenue, Represent utilisation
- ↳ **Guardrails:** disclosure compliance, incidents, creator and strategist satisfaction

Dashboards and owners

DASHBOARD	OWNER	CADENCE

Budget tranches & gates	R	–	–	–	C	–	A

Change management

The engine is a co-pilot for strategists and talent managers. It removes search and spreadsheet work and leaves judgement with them. Strategists co-design the weights, every override is respected and logged, and incentives move toward verified outcomes rather than volume. No headcount reduction is planned from this programme; the capacity freed goes into more briefs per person during peak season.

Budget and funding

First 90 days

LINE	DETAIL	₹
People	₹13.9L a month × 3	41.7L
Creator-data licences (stop-gap)	₹2.5L a month	7.5L
Cloud and storage	₹1.2L a month	3.6L
AI inference (tagging, safety, sentiment)	₹1.0L a month	3.0L
Brand-lift panels and surveys	~₹2.5L a month	7.5L
Attribution tooling, BI, security	₹0.8L a month	2.4L
Pilot credits	Free measurement for 8 pilot brands	8.0L
Contingency	10%	7.4L
Total		**81.1L**

Year one, in tranches

TRANCHE	RELEASED WHEN	₹
1 · Pilot	Day 0	0.81 Cr
2 · Productise & prove	Day-90 gate passed	1.40 Cr
3 · Scale	Month-6 gate passed	1.80 Cr
Year one		**≈ 4.0 Cr**

Funding source: the IPO allocation for capex in the existing business (₹11.07 Cr), which management has said covers technology and creator intelligence, plus internal accruals. Year-two run cost is about ₹3.2 Cr.

For scale: year-one cost is about 28% of FY26 EBITDA (₹14.3 Cr). That is why money is released in tranches and why the kill criteria in section 20 exist.

Value model (assumptions, annual contribution at maturity)

DRIVER	CONSERVATIVE	BASE	AGGRESSIVE	LOGIC
Brand Solutions growth from win rate, repeat and deal size	+8% → ₹0.7 Cr	+20% → ₹1.8 Cr	+35% → ₹3.2 Cr	On ₹30.5 Cr FY26 base, 30% contribution
Represent utilisation	+5% → ₹0.4 Cr	+12% → ₹1.0 Cr	+20% → ₹1.7 Cr	On ₹33.1 Cr, 25% contribution
Measurement fees	5% of ₹12 Cr → ₹0.4 Cr	8% of ₹25 Cr → ₹1.4 Cr	10% of ₹40 Cr → ₹2.8 Cr	70% contribution
Margin from strategist time and fraud avoided	+1 pt → ₹0.6 Cr	+2 pts → ₹1.3 Cr	+3 pts → ₹1.9 Cr	On ₹63.6 Cr influencer revenue
Total per year	**₹2.1 Cr**	**₹5.5 Cr**	**₹9.6 Cr**	Versus ~₹3.2 Cr year-two run cost
Payback (benefits ramp from month 4 to month 15)	not within 3 years	~24 months	~16 months	Gates decide which case we are in by month 6

Build versus buy

Buy commodity creator data (licences) and survey panels at first. **Build** what is defensible: the scoring and forecasting model trained on Chtrbox outcomes, the verified-ROI pipeline on top of existing tracking, and the internal tool. If an acquisition target with mature creator data appears (management has said it is evaluating tech acquisitions), the licence line is the part it would replace.

Management system

RHYTHM	WHO	INPUTS	DECISIONS
Daily · 15-min stand-up	Pod	Yesterday, today, blockers; live-campaign alerts	Unblock; act on alerts
Weekly · Monday business review	Programme owner, heads of Brand Solutions & Represent, tech lead	North Star and input KPIs, pick-vs-pick log, risks	Priorities for the week; escalations
Fortnightly · demo and feedback	Pod + strategist champions	Working software	Backlog changes; weight changes
Monthly · steering committee	CEO, CFO, heads of function	Gate pack: KPIs vs plan, spend vs tranche, risk register	Go / adjust / stop; tranche release
Quarterly · audits	ML scientist, counsel, external reviewer	Model card, fairness audit, compliance sample	Model and policy changes

Decision rights

- **Strategists** decide final rosters; the engine recommends.
- **Programme owner** decides model weights and gates, within policy set by steering.
- **Legal counsel** can veto any creator or claim on compliance grounds.
- **CFO** releases tranches; **CEO** approves pricing and external claims about the engine.

Documents that keep it honest

- **Decision log:** every material decision, the options and why
- **RAID log:** risks, assumptions, issues, dependencies, reviewed weekly
- **Model card:** data, metrics, known limits, last retrain
- **Override log:** every strategist override with a reason code
- **Gate packs:** one page per gate, numbers against targets

18 · SET BEFORE THE FIRST BRIEF, REVIEWED MONTHLY

Guardrails

AREA	GUARDRAIL	BASIS
Data & privacy	Creator data only through OAuth consent; purpose-limited; deletable on request; no follower-level personal data; retention limits	DPDP Act and Rules (notified Nov 2025; core obligations by about May 2027) [20]
Platform terms	No scraping beyond what platform terms allow; use official APIs and licensed data	Meta and YouTube developer terms
Disclosure	#ad or #collab in the first line or overlay of every paid post; checked within 2 hours of going live	ASCI influencer guidelines; Consumer Affairs endorsement guidance [21]
Health claims	Technical claims only by qualified creators; no cure or guaranteed-result language	ASCI Addendum II (Apr 2025); Drugs & Magic Remedies Act [22]
Finance	Only SEBI-registered creators discuss securities or returns; others brand-scripted; IRDAI rules for insurance	SEBI rules on regulated entities and unregistered finfluencers; ASCI Addendum II [23]
Tax	TDS on creator benefits and fees, GST on services, handled in contracting	Income-tax 194R / 194J; GST
Model	Human in the loop; explainable scores; quarterly fairness audit; Represent boost capped at +5 and disclosed	Internal policy
Commercial claims	'Verified' only for L4/L5; forecasts always shown with bands; no guaranteed ROI	Consumer protection rules on misleading claims
Brand safety	Safety gate; morality and kill clauses; monitoring for controversies during flights	Contracts
Security	Role-based access, encryption of personal data, audit logs, vendor reviews	DPDP security safeguards
Peak season	Shadow mode during October–March until accuracy is proven	~60% of revenue in H2

Before we proceed

01	What tracking and attribution exists today: which brands, which methods, what share of revenue is covered	02	Brand contracts allow aggregated use of campaign outcomes for model training; if not, add the clause to renewals
03	Represent contracts updated for data consent and scorecards	04	Platform API access confirmed (business/creator accounts, permissions, rate limits)
05	DPDP readiness: notices, consent records, retention schedule, breach process, data map	06	Baselines measured: brief-to-shortlist time, win rate, margin per campaign, repeat rate
07	Heads of Brand Solutions and Represent agree the success metrics and the roster-boost policy	08	Peak-season protection plan agreed: what the engine may and may not change before April
09	CFO signs off tranches and kill criteria	10	Security baseline in place before any creator data is ingested
11	Legal review of the words we use externally: 'verified', 'incremental', 'AI'	12	Pilot brands selected, with data-sharing agreed in writing
13	Engineering capacity confirmed: hires or a contractor in place by week 2	14	A written list of what we will not do in 90 days: no self-serve, no regulated verticals before month 4, no MENA before day 61

Risks, warnings and honest cons

RISK	LIKELIHOOD	IMPACT	MITIGATION	EARLY WARNING	OWNER
Creators refuse to connect data	Medium	High	Start with Represent (contracted); value exchange through scorecards and faster payments; licensed data fallback	Consent rate < 40% by day 30	Head of Represent
Brands won't share outcome data	Medium	High	Begin with codes, links and affiliate (L3); aggregated or clean-room sharing; contract clause	< 2 pilots at L4 by day 45	Head of Brand Solutions
Verified ROI looks worse than past claims	High	Medium	Frame as an upgrade; show claimed, attributed and incremental together; show engine improvement; start with friendly brands	Pilot brand pushback	Programme owner
Cold start and forecast error	High	Medium	Shadow mode; confidence bands; MAPE gates; human in the loop	MAPE > 35% at day 45	ML scientist
Strategist resistance	Medium	High	Co-design weights; champions; incentives on outcomes; no-headcount-cut commitment	Usefulness score < 3.5	Programme owner
Platform API changes	Medium	Medium	Multiple sources; abstraction layer; consented data first	Deprecation notices	Data engineer
Regulatory change (ASCI, SEBI, DPDP)	Medium	Medium	Counsel on retainer; gates are configuration, not code	New circulars	Legal counsel
Represent conflict of interest	Medium	High	Boost capped at +5 and shown on the score; quarterly audit; disclosure to brands	Roster share of plans rises without fit	Steering committee
Peak-season disruption	Low	High	Shadow mode October–March; no delivery changes without strategist sign-off	Any delivery miss linked to the engine	Programme owner
Hiring delays	Medium	Medium	Contractors or agency for 90 days; scope cut before deadlines slip	Roles unfilled at week 4	Programme owner
Cost overrun or value not proven	Medium	High	Tranches; kill criteria; monthly gate packs	Spend > 110% of tranche	CFO
Data breach	Low	High	Minimal personal data, encryption, access control, incident SOP	Security alerts	Tech lead
Optimising only what is measurable	Medium	Medium	Objective-specific KPIs; brand lift for awareness; LTV for repeat categories	Awareness briefs judged on clicks	Programme owner
Regional and small creators excluded	Medium	Medium	Within-tier percentiles; language coverage; fairness audit	Under-selection > 20% for any group	ML scientist
MENA distracts the core	Medium	Medium	Starts day 61, 300-creator pilot, separate success metric	Core KPIs slip after MENA start	Steering committee

The honest cons

- Verified ROI will often be lower than the numbers brands have been shown before. Some brands prefer flattering numbers, and some will leave.
- Measurement costs money. Holdouts and lift studies don't fit every brief; small campaigns will stay at L3–L4.
- The data advantage takes time. The first three months are mostly learning, and the engine will be wrong in visible ways.
- Optimising outcome per rupee shifts spend from mega creators to mid and micro creators. Revenue per campaign can dip even as results improve, and some creator relationships will feel it.
- Performance transparency can strain relationships with creators who score poorly, including roster creators.
- The engine depends on platform APIs and creator consent, neither of which Chtrbox controls.
- A tool that sits beside strategists only works if they use it. Adoption is the real risk, not the code.

Roadmap: years one and two

Kill and scale criteria

Day 90: continue to tranche 2 if at least two of three hold: engine picks ≥ 50% of final rosters with usefulness ≥ 3.8; views MAPE < 25%; at least one brand renews or expands citing verified ROI. Otherwise stop the build and keep the measurement SOPs, which pay for themselves on their own. **Month 6:** scale to tranche 3 if L4+ covers ≥ 60% of revenue, win rate is up ≥ 5 points and at least three brands pay a measurement fee.

HORIZON	PRODUCT	COMMERCIAL	ORGANISATION
Months 4–6	Incrementality at scale; regulated verticals behind gates; read-only dashboards for top 10 clients	Verified ROI packages sold to 10+ brands	Pod complete; strategist champions in every team
Months 7–12	Creator scorecards in Represent; agency shortlists; pricing model (fair rate per outcome); MENA graph live	Measurement fee on ~₹25 Cr of spend; outcome-linked pricing on a share of performance briefs	Add ML engineer, data engineer, MENA analyst
Year 2	Creator Intelligence subscriptions (brands, agencies); creator–brand graph for brands with no history; seasonal demand forecasts	Intelligence revenue ≥ ₹2 Cr; data partnerships with marketplaces and quick-commerce	Product and data as a standing unit with its own P&L
Year 2+	Integrate any acquired creator-tech; expand graph to wider GCC	Platform revenue growing faster than headcount	Engine is the default way every brief starts

Where this leaves Chtrbox

Today Chtrbox sells campaigns, and every campaign needs people. In two years it can sell proof: a standard for what a creator campaign achieved, used across its own campaigns, licensed to agencies and brands, and backed by data no new entrant has. That changes the margin profile and the story the company tells investors.

22 · EIGHT MINUTES, THEN Q&A

Interview walkthrough and likely questions

TIME	SCREEN	WHAT TO SHOW AND SAY
0:00–1:00	Overview	The thesis and the four public numbers: revenue up 42.5%, margin down 3.5 points. The engine is how growth stops costing margin.
1:00–3:00	Brand Match · Olay	Brand DNA → gated creators (fake audience, competitor conflicts) → top-ranked creator and why → switch objective to Conversion and watch the ranking change → engine plan vs follower count → efficiency map.
3:00–3:30	Brand Match · Groww	Finance creators without SEBI registration are gated. Compliance is built in, not a checklist.
3:30–4:15	Discovery	Type 'Hindi beauty creators under 25k with ER above 3%' and show it parsed into filters.
4:15–5:00	Vertical Lens	Heatmap of where talent sits; the Beauty playbook and benchmarks by tier.
5:00–6:30	Campaigns & ROI · Amazon (live)	Reported → real people in target; waterfall from attributed to incremental; holdout; alerts and actions.
6:30–8:00	How it works · Rollout plan	76 data points, the formula, the ROI ladder; then 30/60/90, the pod, ₹81L, guardrails and kill criteria.

LIKELY QUESTION	ANSWER IN ONE BREATH
How is this different from Qoruz, Kofluence, Modash or HypeAuditor?	Those show creator data. This connects creator data to Chtrbox's campaign outcomes and live tracking, so it can forecast and verify results, not just describe audiences.
Where does the data come from?	Creator OAuth for first-party audience data (Represent first), Chtrbox's campaign history and tracking, brand outcome data under contract, and licensed data to fill gaps.
What if creators don't consent?	Represent creators are contracted; others get scorecards and faster briefs in return. Licensed data covers the rest at lower confidence, and the score says so.
Doesn't the roster boost bias it?	It is capped at 5 points, shown on every score and disclosed to brands. Roster creators win on fit.
When will we see results?	A ranked list on day 15, the first verified-ROI report by day 45, half of campaigns at L4+ by day 90.
What does it cost, and what if it doesn't work?	₹81L for 90 days. Money is released in tranches; if the day-90 gate fails we stop building and keep the measurement SOPs.
What do you need from us?	Data access, two strategist champions, a talent manager, three pilot brands and a weekly hour from the heads of Brand Solutions and Represent.

Objections brands will raise

OBJECTION	ANSWER
'Our numbers will look worse.'	They will look honest. We show claimed, attributed and incremental side by side, and the engine raises the incremental figure. Brands that fund the next campaign trust the honest number.
'We already use a creator tool.'	Tools show creator data. They don't connect it to your orders and a holdout. That needs campaign execution and tracking, which is what we run.
'We can't share sales data.'	Start at L3 with codes and links; move to L4 with aggregated or clean-room sharing. Nothing about individual customers is needed.
'Is this just a black box?'	Every score shows its seven parts and the reason. Strategists can override; every override is logged.

    https://indiibot.com/blog-influencer-india.html

Assumptions and method

- Simulated platform: 420 synthetic creators; tier engagement medians scaled to India 2026 benchmarks (nano 4.9%, micro 2.8%, mid 1.4%, macro 0.9%, mega 0.4%) [24]; reel rates scaled to published ranges (micro ₹5K–50K, mid ₹50K–2L, macro ₹2–5L) [25][26].
- Larger accounts carry more fake or inactive followers in the sample (mean real share 86% nano to 75% mega).
- Forecast assist factor 2.8 (codes, affiliate and search-assisted orders per clicked order) and brand-specific conversion rates are modelling assumptions, to be calibrated in days 31–45.
- Campaign incrementality shares (45–66%) and return rates (2–17%) are assumptions typical of category, replaced by holdout results in practice.
- Segment revenue is derived as FY26 revenue × reported segment shares. Sources differ slightly on FY25 margins (20.46% vs 20.57%).
- Salaries are Mumbai market estimates for 2026. Budget, value model and payback are my assumptions, to be validated with the CFO.
- Brand names are publicly reported Chtrbox clients [13][14][15][16] or labelled prospects. No real campaign data for them is used or implied.

Glossary

TERM	MEANING
ER	Engagement rate: interactions ÷ followers
CTR	Click-through rate: link clicks ÷ views
TG	Target group defined in the Brand DNA
MAPE	Mean absolute percentage error of forecasts
iROAS	Incremental revenue ÷ spend, using a holdout
EMV	Earned media value: a rate-card valuation of views and likes
L0–L5	Levels on the verified-ROI ladder
Holdout	Matched cities or users not exposed, used as the control
Brand lift	Survey difference between exposed and control groups
OAuth	Creator-authorised connection to platform insights
Represent	Chtrbox's exclusive talent-management division
WBR	Weekly business review

About the prototype

Open `Creator-Intelligence-Engine.html` in any browser; it works offline. Keys 1–7 switch views, / searches, Esc closes a creator profile. The rebuild scripts are in `source/`.
