1 · What customers say

59% of complaints come down to three things: no-shows and cancellations, price and offer clarity and service quality.

Every one of the 500 most recent App Store reviews tagged with one primary driver: the reason that customer would contact support. 288 are complaints; 212 are praise.

Read this first

Reviews are a complaint channel, not a satisfaction score. The store average is 4.73★ across 1,28,866 ratings, yet 45% of written reviews are 1★. Use this for the mix of problems, not their rate.

72 complaints (25%) say they already contacted support, and 63 of them say support didn't fix it. Weighted by who already called, the top three are 71% of contacts, and no-shows and cancellations alone are 36%.

Severity of complaints

High: money lost, injury, safety	**47**	16%
Medium: failed or poor service	**120**	42%
Low: annoyance	**119**	41%

Source: Apple App Store (India), public customer-reviews feed. 500 most recent reviews, 18 Jun–21 Oct 2026. Tagged twice with one codebook; disagreements settled.

No-shows and cancellations lead, at 20% of complaints. Customers don't just dislike them; many have already called support about them.

Real quotes, lightly trimmed. Names and order IDs are removed.

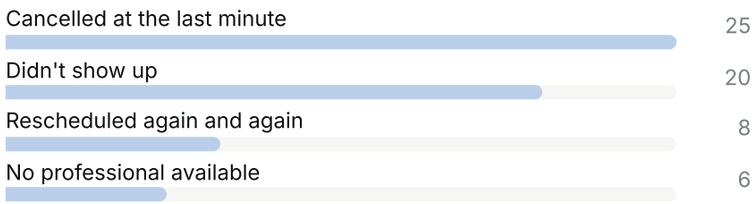

#1 driver

No-shows & cancellations

20% 59 of 288 complaints

44% contacted support · 2% high severity · 17% say they'll leave

What it looks like

In their words

★★★★★ 2 Aug

“I booked a service for 4:30 PM today, and instead of informing me beforehand, they called me at exactly 4:30 PM to say that no professional was available”

★★★★★ 5 Sept

“professional refused to come and asked me to cancel and when I told her u cancel she kept calling me till I cancelled it.”

★★★★★ 16 Oct

“Twice professionals didn’t show up. No cancellations, no notice, just plain didn’t show up.”

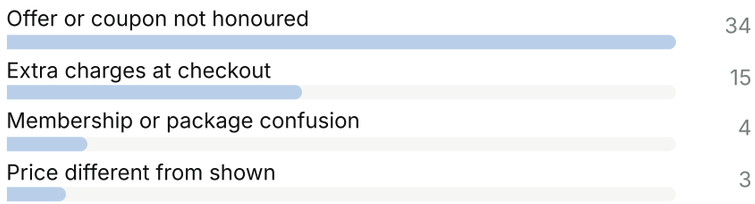

#2 driver

Price & offer clarity

19% 56 of 288 complaints

13% contacted support · 2% high severity · 13% say they'll leave

What it looks like

In their words

★★★★★ 9 Oct

“The first 2 days the slots were already over by 1:02 pm.”

★★★★★ 19 Oct

“If I’m booking a spa for 970 it sums up to 1399 by the end of the payment”

★★★★★ 11 Oct

“while booking I get to know there are platform charges, mandatory disposable kit charges which resulted me to pay extra amount unnecessarily.”

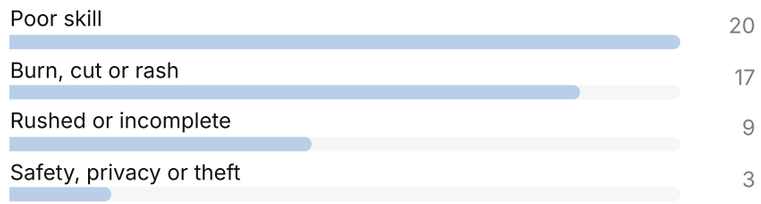

#3 driver

Service quality & conduct

19% 55 of 288 complaints

33% contacted support · 40% high severity · 20% say they'll leave

What it looks like

In their words

★★★★★ 13 Oct

“I got burned on my hand after my waxing, and customer support said they'd give me a 400 free coupon. What do I do with my hand now?”

★★★★★ 22 Sept

“One knocked off a good part of my eyebrow I was hoping that’s a basic skill but guess not.”

★★★★★ 23 Aug

“Professional was in too much hurry, and didn’t do the work properly. I got rashes and skin irritation.”

Source: Apple App Store (India), public customer-reviews feed. 500 most recent reviews, 18 Jun–21 Oct 2026. Tagged twice with one codebook; disagreements settled.

3 · Root causes

Each driver traces back to something the operation does, not something customers do.

Five whys on each top driver. In reviews = customers say it directly. To verify = my hypothesis, to check against ticket and ops data in week 1.

No-shows & cancellations

Bookings fail at or after the slot time, and the customer is the last to know.

Why 1 The assigned professional declined, went on leave or fell ill, and no one else was sent (#62, #247, #250). In reviews

Why 2 Nobody checks before the slot that she is coming. The customer finds out at the slot time, or only when she calls support (#15, #193, #338). In reviews

Why 3 Accepting a job does not lock the professional in. Some ask the customer to cancel instead, so the drop is logged as a customer cancellation (#127, #219, #362). In reviews

Why 4 The app shows slots when no professional is free, and products run short too, so there is no one ready to send instead (#73, #284, #394). In reviews

Why 5 Slots are sold off the calendar, not off confirmed professional capacity in that area and hour, and payment is taken before anyone confirms. To verify

ROOT CAUSE
Slots are sold before a professional is confirmed, and nothing checks or backfills a dropped job before the slot time.

What would prove me wrong: If most failed bookings had a professional confirmed 2 hours before the slot and still failed, the problem is on-the-day behaviour, not slot inventory.

Price & offer clarity

Customers feel tricked: the free offer is gone in a minute, and the price grows at checkout.

Why 1 The offer they were sent could not be booked, or the final price was higher than the price shown (#10, #23). In reviews

Why 2 The free pedicure opens at 1 pm for everyone. Slots are gone by 1:02, and the app crashes at checkout in the rush (#78, #121, #138). In reviews

Why 3 It reads as a scam, not a sell-out, because it is pushed to everyone without saying how many slots exist (#48, #77). In reviews

Why 4 Compulsory fees sit outside the listed price: a platform fee, a ₹99 kit charge, a ₹300 line labelled tax. They appear only at checkout (#55, #126, #190). In reviews

Why 5 Offers and price pages are judged on installs and visits, not on how many offers are honoured or how many complaints they create. To verify

ROOT CAUSE
Offers and prices are built to attract, not to be honoured: a tiny flash offer pushed to everyone, and compulsory fees shown only at checkout.

What would prove me wrong: If offer complaints spike only on days the app crashed at 1 pm, this is an engineering capacity problem, not offer design.

Service quality & conduct

The service itself goes wrong: untrained or rushed work, rude behaviour, and burns or rashes (11 of the 24 burn or reaction reviews follow waxing).

Why 1 The professional lacked the skill for that service: burnt skin after waxing, ruined brows, half-done work (#41, #152, #191). In reviews

Why 2 Professionals reach customers before their skill on each service is proven. Quality is checked by ratings after the job, not before it. To verify

Why 3 Professionals rush the job ('in too much hurry', a facial done in 30 minutes), likely because back-to-back slots leave no slack (#50, #264, #351). In reviews

Why 4 When something goes wrong, the answer is a coupon, not a call-back or care for the injury: a ₹400 coupon for a burnt hand (#41, #104, #217). In reviews

Why 5 Complaints are closed case by case in support and don't flow back to the professional's record, training or assignment. To verify

ROOT CAUSE
No closed loop from complaint to professional: skill isn't certified per service before risky jobs like waxing, and complaints end in coupons instead of retraining.

What would prove me wrong: If complaints are spread evenly across professionals rather than concentrated in a few, the problem is training content or products, not specific people.

Source: Apple App Store (India), public customer-reviews feed. 500 most recent reviews, 18 Jun–21 Oct 2026. Tagged twice with one codebook; disagreements settled.

4 · Impact in contacts and rupees

The top three drivers are the bulk of the support load, and the bigger cost is customers who don't come back.

A transparent model. Every input is an assumption you can move. The driver mix comes from the reviews; the rest I would replace with real numbers in week 1.

Assumptions

Bookings a month **3,50,000**

Public figure: about 3.5 lakh a month

Contacts per 100 bookings **12**

Assumption. Typical for at-home services: 8–15

Cost per contact (₹) **₹45**

Assumption: blended chat and voice

Cut in top-3 contacts from the fixes **30%**

Target for the three fixes on slide 5

Customers lost per top-3 contact **10%**

Reviews say 16%; real rate is lower

Yearly value of a customer (₹) **₹5,400**

Assumption: about ₹1,350 a visit, 4–5 visits a year

Contacts a month
42,000
₹18.9 L a month in support cost

From the top 3 drivers
24,792
59% of contacts · ₹11.2 L a month

If the fixes land
7,438
fewer contacts a month · ₹40.2 L a year saved

Contacts and cost by driver, per month

Driver share = share of complaint reviews. Reviews over-weight severe issues, so treat this as the direction, not the decimal.

Driver	Share	Contacts	Cost	After fixes
No-shows & cancellations	20.5%	8,604	₹3.9 L	6,023
Price & offer clarity	19.4%	8,167	₹3.7 L	5,717
Service quality & conduct	19.1%	8,021	₹3.6 L	5,615
Products used	10.4%	4,375	₹2.0 L	4,375
App & booking bugs	10.1%	4,229	₹1.9 L	4,229
Payments & refunds	4.2%	1,750	₹78,750	1,750
Support itself	1.7%	729	₹32,813	729
Late arrivals	1.4%	583	₹26,250	583
Other or vague	13.2%	5,542	₹2.5 L	5,542
Total	**100%**	**42,000**	**₹18.9 L**	**34,563**

The bigger number is retention. Cutting 7,438 bad experiences a month and keeping 10% of those customers is about 744 customers kept a month, worth up to **₹4.82 Cr** a year at ₹5,400 each. Support savings: **₹40.2 L** a year.

Source: Apple App Store (India), public customer-reviews feed. 500 most recent reviews, 18 Jun–21 Oct 2026. Tagged twice with one codebook; disagreements settled.

5 · First three fixes, and how I'd measure them

Three fixes, three owners, one metric each: contacts per 100 bookings by driver.

One fix per top driver. Each has an owner, one metric, a target and a test that would show it worked.

Fix	What changes	Metric · target	How I'd measure it
1. Confirm or reassign 2 hours before No-shows & cancellations · City Ops, Supply and Product	Professional confirms 2 hours before the slot. No confirmation means auto-reassign from the nearby pool, and the customer gets a message with a choice before the slot, not after. Sell slots only against confirmed capacity. Log a professional's 'please cancel' as a partner cancellation.	**Failed bookings per 100, partner side** Down 40% in 8 weeks; 90% of failures with 2+ hours' notice	Pilot in 2 cities against 2 similar cities for 4 weeks. Track failed bookings, notice given, reassign success, and contacts per 100 bookings for 'where is my professional'.
2. Price shown is price paid; honest offers Price & offer clarity · Growth, Product and Finance	Show compulsory fees inside the listed price. Label flash offers with the number of slots ('200 free pedicures today') and give a waitlist or coupon when they run out. Load-test the 1 pm checkout.	**Offer and price complaints per 1,000 bookings** Down 50%, with checkout conversion flat or better	A/B test all-in prices on 10% of users for 2 weeks: conversion, cart-to-payment drop-off, and contacts tagged offer or charges. Track app crashes in the 1 pm window.
3. Certify risky services; close the loop on complaints Service quality & conduct · Training & QA and CX	Certify each professional per service, waxing first, before she is assigned it. Every injury complaint gets a call within 24 hours, care for the customer, and the professional is paused and retrained. Weekly list of professionals with 2+ complaints.	**Injury and quality complaints per 1,000 jobs** Down 30% in 12 weeks; no repeat complaint within 30 days of retraining	Before and after by hub cohort. Check how concentrated complaints are: if the worst 10% of professionals carry most of them, target them first.

First 30 days

1. Week 1: pull the last 90 days of support tickets and tag them with this codebook. Compare the ticket mix with this review mix.
2. Week 2: put rupees on each driver from real data: contacts, refunds, compensation coupons and lost repeat bookings.
3. Week 3: start the two pilots: confirm-or-reassign in 2 cities, and all-in prices for 10% of users.
4. Week 4: first readout to you, and a weekly contacts-per-100-bookings view by driver.

The one metric for the whole programme

> **Contacts per 100 bookings**, split by driver, reviewed weekly. It falls only if customers have fewer reasons to call, which is the point. Watch first-contact resolution next to it, so contacts aren't cut by making support harder to reach.

Source: Apple App Store (India), public customer-reviews feed. 500 most recent reviews, 18 Jun–21 Oct 2026. Tagged twice with one codebook; disagreements settled.

One-page readout

Why customers contact Yes Madam, and what to fix first.

Yes Madam · 500 App Store reviews

PROBLEM

Customers who write reviews are mostly unhappy: 45% of the 500 most recent App Store reviews are 1★, against a 4.73★ store average.

59% of complaints come from three drivers: no-shows and cancellations (20%), price and offer clarity (19%) and service quality (19%).

25% of complaints say they already contacted support, and the same three drivers are 71% of those; no-shows and cancellations alone are 36%. 13% say they will stop using the app.

ROOT CAUSE

- Slots are sold before a professional is confirmed, and nothing checks or backfills a dropped job before the slot time.
- Offers and prices are built to attract, not to be honoured: a tiny flash offer pushed to everyone, and compulsory fees shown only at checkout.
- No closed loop from complaint to professional: skill isn't certified per service before risky jobs like waxing, and complaints end in coupons instead of retraining.

IMPACT

- At about 3.5 lakh bookings a month and an assumed 12 contacts per 100 bookings, that is about 42,000 contacts a month.
- The top three drivers would be about 59% of them, about 24,800 a month. A 30% cut removes about 7,400 contacts a month, or ₹40.2 L a year at ₹45 a contact.
- The bigger prize is retention: if 1 in 10 customers behind those bad experiences would otherwise leave, keeping them is worth up to ₹4.8 Cr a year at ₹5,400 a customer.

ACTION

1. Confirm or reassign 2 hours before: failed bookings per 100, partner side, down 40% in 8 weeks; 90% of failures with 2+ hours' notice.
2. Price shown is price paid; honest offers: offer and price complaints per 1,000 bookings, down 50%, with checkout conversion flat or better.
3. Certify risky services; close the loop on complaints: injury and quality complaints per 1,000 jobs, down 30% in 12 weeks; no repeat complaint within 30 days of retraining.

Based on 500 public App Store reviews, which skew negative and towards iPhone users, and are not ticket data. Use them for the mix of problems; confirm the size with support tickets in week 1.

Source: Apple App Store (India), public customer-reviews feed. 500 most recent reviews, 18 Jun–21 Oct 2026. Tagged twice with one codebook; disagreements settled.

A · Method and bias

How the 500 reviews were read, tagged and checked, and what they can't tell us.

Source

Where	Apple's public customer-reviews feed for the Yes Madam app, India storefront, sorted by most recent
Which	The 500 most recent reviews (the feed's maximum), 18 Jun – 21 Oct 2026
Why not Play Store	Google Play has no public review feed, and copying it at scale breaks its terms. The Android version of this analysis is a hand-copied sample of 100–300 reviews in the same sheet.
Privacy	Reviewer names dropped. Names of professionals and order IDs inside reviews replaced with [name] and [id].

Tagging, double-checked

One codebook, built on the eight drivers in the brief. All 500 reviews were tagged twice with it, in two independent AI-assisted passes. The passes agreed on the primary driver for **98%** (Cohen's kappa **0.98**). A third read against the codebook settled the 8 disagreements, and every quote was checked word for word against its review.

Bias, said out loud

Negativity. People write when upset: 45% of written reviews are 1★, against a 4.73★ store average. Use the mix of problems, not the rate.

iPhone only. App Store reviewers skew metro and higher income. Android is most of the base; a hand-copied Play Store sample would check the mix.

Campaign spikes. One offer campaign can flood reviews for weeks. Check the month view before calling it structural.

Not tickets. Most contacts never become reviews, and quick 'where is my professional' calls rarely do. The ticket mix will differ.

Self-reported. Claims such as theft or injury are allegations, not verified facts. They are counted, not judged.

Codebook

No-shows & cancellations	The professional didn't turn up, cancelled late, or the company kept rescheduling or had no one to send
Service quality & conduct	Poor skill, rushed or incomplete work, hygiene, burns or rashes from technique, rude behaviour, safety
Price & offer clarity	Price or offer not as shown: extra charges at checkout, coupons or free-service offers that don't work
Payments & refunds	Money taken or stuck: refund slow or refused, charged but not served, wallet or coupon money lost
Support itself	Complaint is only about support: unreachable, scripted, slow, no escalation
App & booking bugs	App crashes or won't open, login, booking or checkout bugs, no slots, spam notifications
Late arrivals	Professional arrived late, assignment took long, or the service overran
Products used	Product quality, missing or wrong products, pushed upsells, reactions blamed on the product
Other or vague	A complaint with no specific problem, e.g. 'worst app', 'scam'

Rule: support is the driver only when support itself is the whole complaint. Otherwise the underlying problem is the driver and support is secondary.

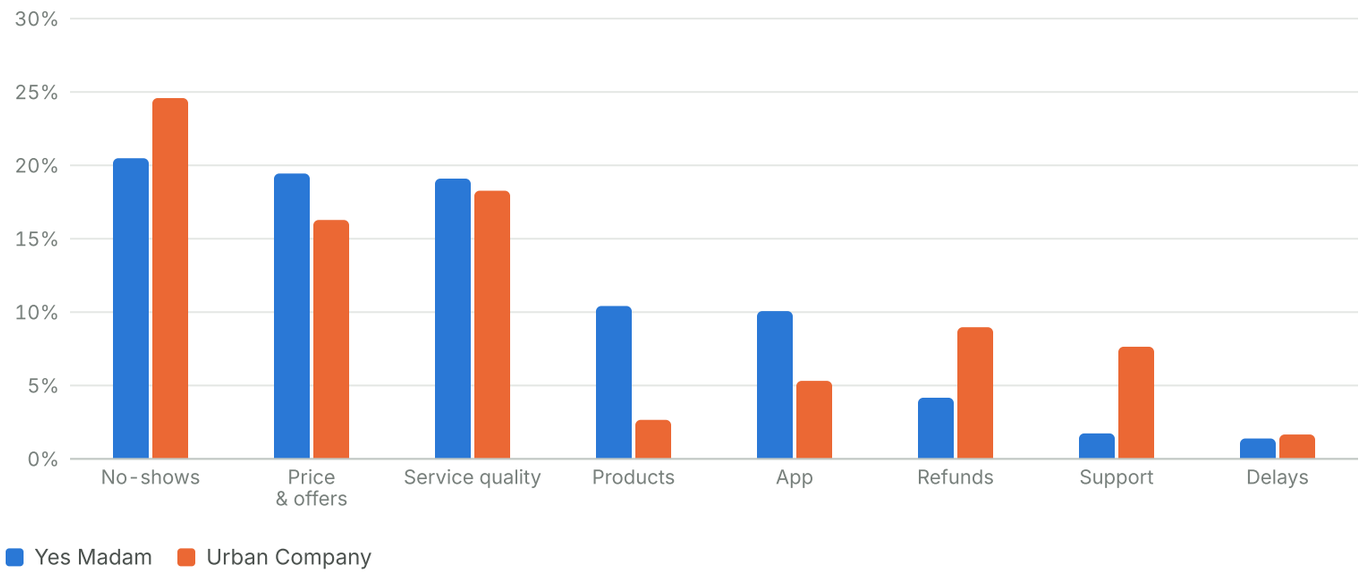

Source: Apple App Store (India), public customer-reviews feed. 500 most recent reviews, 18 Jun–21 Oct 2026. Tagged twice with one codebook; disagreements settled.

B · Benchmark: Urban Company

Same top drivers as Urban Company, but Yes Madam over-indexes on products.

Same method, 500 most recent Urban Company App Store reviews (10 Sept – 21 Oct). Urban Company covers all home services, so salon issues are only part of its mix.

Share of complaints by driver

Driver	Yes Madam	Urban Co.	Gap
No-shows & cancellations	20.5%	24.6%	−4.1 pts
Price & offer clarity	19.4%	16.3%	+3.2 pts
Service quality & conduct	19.1%	18.3%	+0.8 pts
Products used	10.4%	2.7%	+7.8 pts
App & booking bugs	10.1%	5.3%	+4.8 pts
Payments & refunds	4.2%	9.0%	−4.8 pts
Support itself	1.7%	7.6%	−5.9 pts
Late arrivals	1.4%	1.7%	−0.3 pts

Same pain, different weights. Urban Company's top three are no-shows and cancellations, service quality, price and offer clarity. Overlap with Yes Madam's top three: 3 of 3.

Yes Madam over-indexes on products: 10% of complaints vs 3% at Urban Company (+8 pts).

Yes Madam under-indexes on support: 2% vs 8% (-6 pts).

Both apps: over 4 in 10 written reviews are 1★ (45% Yes Madam, 42% Urban Company), against store averages of 4.73★ and 4.77★. Reviews skew negative everywhere.

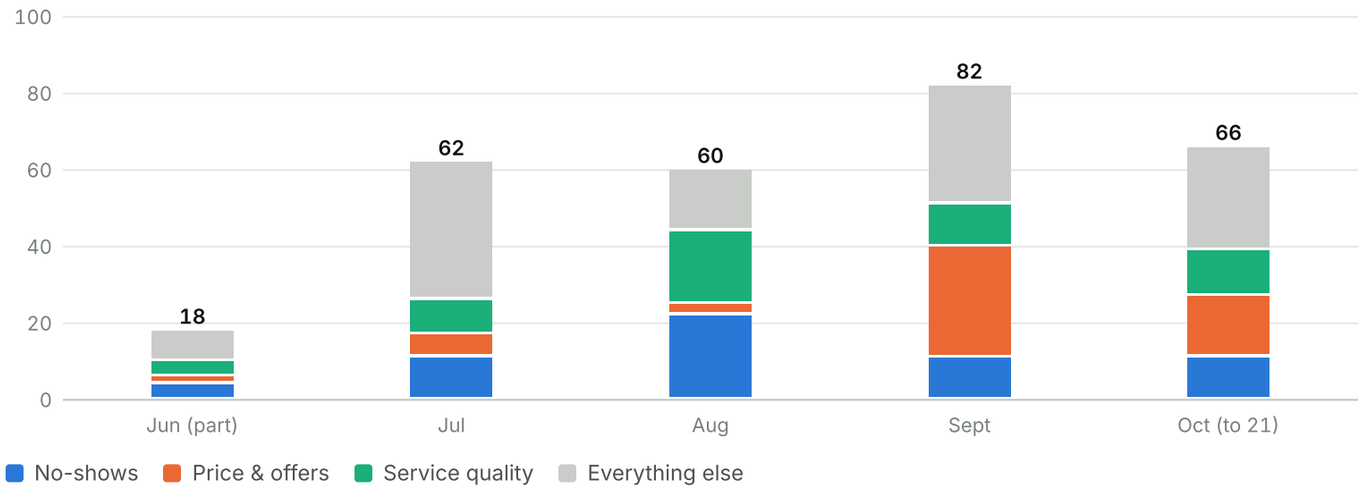

Source: Apple App Store (India), public customer-reviews feed. 500 most recent reviews, 18 Jun–21 Oct 2026. Tagged twice with one codebook; disagreements settled.

Complaints by month and by app version.

Complaint reviews by month and driver, and app complaints by app version.

Complaints by month

Top 3 drivers in colour, the rest in gray. Offer complaints ('offer or coupon not honoured') peak in Sep (19 reviews). The free-pedicure campaign alone is 17 of the 56 price and offer complaints (13 Sep to 17 Oct). Take it out and price and offers still rank #3.

App complaints by version

Reviews tagged "App", by the version the reviewer was on.

Version	Reviews	App complaints	Share
18.9.0	87	10	11%
18.8.0	100	9	9%
18.7.0	70	3	4%
18.6.0	17	0	0%
18.5.0	133	5	4%
18.2.0	93	2	2%

Version 18.9.0 has the most app complaints (10 of 87 reviews on it). 29 reviews in all are about the app itself: a release-quality question for tech, not an ops one.

Source: Apple App Store (India), public customer-reviews feed. 500 most recent reviews, 18 Jun–21 Oct 2026. Tagged twice with one codebook; disagreements settled.

Each JD line, where it shows up in this teardown, and where I've done it before.

Prepared by Chethan

The JD asks for	In this teardown	Where I've done it before
Root cause analysis	Five whys on each top driver, with evidence vs hypothesis marked and a test that would prove each one wrong	LVX: funnel analysis across ₹3.5 Cr, ₹7 Cr and ₹9 Cr+ launches; found where investors stalled; conversion up 20%
Complaint reduction	Three fixes with an owner, one metric, a target and a pilot design	Techvaraha: 4 SOPs, QA workflows and KRAs; on-time delivery from 65% to 90%; zero missed deliverables for 3 quarters
Lower contact rates	Contacts per 100 bookings as the one metric; an impact model in contacts and rupees	Techvaraha: escalation turnaround down 40% with one tracker and a review rhythm
Crisp narrative	Five slides, three minutes, and a one-page readout: problem, root cause, impact, action	Techvaraha: 15+ executive presentations
Leadership presentations	A readout written for a VP decision, with the bias said out loud	LVX: dashboards for the founder and management tracking ₹7 Cr+ of pipeline; reporting accuracy up 30%
Clean, trustworthy data	Two independent taggers, agreement and kappa measured, names and IDs removed	LVX: reporting SOPs and data workflows; manual errors down 35%
Supply-side ops	No-show root cause traced to slot inventory vs confirmed capacity	Built a network of 1,400+ healthcare practitioners and 15+ hospital tie-ups
